

EXO₂ COMPACT THE NEW PORTABLE FIRE EXTINGUISHING SYSTEM

Type: EXO₂ COMPACT

The new portable fire extinguishing system

The EXO₂ program was developed in response to the needs of security forces to resolve fire situations resulting from acts of vandalism during crowd control and riot prevention operations. The system can react rapidly to such fires and is designed to be worn attached to the body, without affecting the mobility of those using it.

Portability

EXO₂ devices are remarkably small and lightweight, considering their effectiveness, and handling is straightforward.

Unpressurised

EXO₂ devices are not subject to pressure vessel regulations and are not subject to periodic inspections.

Safety

EXO₂ offers a longer throw distance than most extinguishers. Quick cartridge replacement allows multiple successive interventions.

Environmentally friendly

EXO₂ devices do not generate toxic gases or waste of any kind.

Type	A simpler design, made of aluminum, front-loading system with magnetic cartridge retention inside the extinguishing device, and push-button activation.
Intuitive activation:	The device is easy to use, just press a button.
Safe:	There is no danger of explosion as the cartridges are not under pressure.
Compact and lightweight:	The compact model is lighter, weighing less than 100g.
Safe distance:	Allows you to operate from a safe distance of 3 to 5 meters.
Quick recharge:	Can be quickly recharged to deal with multiple fires in a short time.
Non-toxic:	Produces no substances harmful to health or the environment.
